

Janitor Squad

a Cold War, horror TTRPG by
Lara Rohrsen

BETA VERSION

Dedicated to my trans siblings.

Introduction

Janitor Squad is a multiplayer tabletop role playing game (TTRPG) about a team of agents that go on suicide missions to contain or destroy dangerous anomalies for a shadowy agency called "The Institute".

Players will slip into the role of the titular "Janitors" an expendable cleanup crew that gets send in to make first contact with potential anomalies and try to contain them. Players need to use their wits, tools and teamwork as consequences of failure may be deadly.

But death does not mean the end for an employee of the Institute. Through experimental and anomalous means, new Janitors can be made from the old, albeit at the risk of significant mutations and the loss of recent memories.

Janitor Squad takes place in 1980s East-Germany and players must not only navigate the horrifying anomalies that they are get send out to clear but also the clandestine nature of cold war espionage. Other countries have similar institutions and the ever present risk of getting found out by both western and eastern spy agencies means Janitors need to act quick and inconspicuous.

Basic Gameplay

Janitor Squad is inspired by the "Powered by the Apocalypse" style of games and as such uses similar rules. These rules are there to help the table create an interesting narrative. This is not a war or versus game and the game master is not the enemy of the players.

The rules and moves are there to give the narrative a sense of internal consistency, help reduce the game master's work load and give players expected outcomes and repeatable actions they can work with.

The basic dice roll, unless specified otherwise, are two 6 sided dice abbreviated as 2d6. To roll a check of any kind roll 2d6 plus whatever stat is applicable. If the result is below a 7 it's a miss, 7-10 is a partial success and above 10 is a full success. Most moves do not use critical successes or failures and those that do explicitly specify them.

Before players attempt a roll for something, they describe the action they want to take and then the game master should state the consequences of the roll (now sometimes things should be left to mystery) before the player attempts it.

Game masters don't roll dice in general, what the game master says happens but if it involves players, they should get the ability to react to this.

This system tries to keep things more universally applicable, as such it should be rather easy to alter the setting without changing the core rules too much. Want it to be about 17th century ghost hunters or a group of people traveling from place to place using a portal? Go for it. You could even remove the anomaly aspect entirely and turn this into tactical espionage action but I think there are probably better systems that do just that.

Janitors

Janitors are recruited from all walks of life and since the Institute generally does not care about who they are as long as they do their job, it has become quite the club for all manners of outcasts and eccentric weirdos.

Once you are part of the Institute's lower floors you can't go back to your old life (there are measures in place to prevent this) and the Institute becomes your new home and family.

Aptitude Scores

Each Janitor has five aptitude scores that govern their ability to perform all manner of moves. Upon recruitment all of these start at 0 and the base scores are determined by the chosen **background**. After choosing a background the player then gets a +1 to a score of their choice and picks a **training** before going into their first mission.

These scores have a soft capacity of 3 and can only go beyond that through mutations or temporary effects from consumables, equipment, anomalies or intense training. Scores can also go into the negative.

The five aptitude scores are:

MIND governs the ability to resist paranormal intrusions into the mind, resist horrifying images and shock.

COGNITION is the ability to investigate clues, spot what is hidden and make logical connections.

PHYSIQUE is a measurement of a Janitor's general fitness and strength.

MOTORICS govern all things firearms, interfacing with or manipulation of various objects.

CHARISMA governs a Janitors ability to influence witnesses, keep their cool or cheer up their team.

Health and Sanity

A Janitors physical and mental status is tracked via the **Health** and **Sanity** stats. Both initially start at 10.

A Janitor falling below 1 health point (HP) enters the **Downed** state and needs to be **stabilized** or they will die. If the initial damage was more than twice the total HP the Janitor is obliterated and dies instantly instead. HP get fully restored after a mission.

Horrifying imagery, or intrusions into the mind by anomalies will potentially drain a Janitors **Sanity** (see **Face Your Fears** move). At a Sanity level of 5 the character becomes **Nervous**. If the Sanity falls to 0 or below the Janitor must roll a **MIND** check, on a failure the character becomes **Panicked**. Sanity is not restored fully upon returning to the Institute alive although it is restored to a minimum of 5, so every Janitor below that is set to 5. Successful completion of a mission is also good for morale and awards all Janitors +1 Sanity (not more than 10 however). Outside of missions Sanity must be restored via **Therapy**.

Injuries

If an attack deals more than half a character's HP in damage it will result in a major physical wound. The type of wound is either decided by the narrative or by rolling on the **Physical Wounds** table. These wounds are often life threatening and often can't be treated during a mission.

Likewise if a janitor hits 0 Sanity during a mission they suffer a mental trauma either decided by the narrative or by rolling on the **Mental Wounds** table.

Status Effects

Nervous: Nervous characters have a hard time concentrating and making logical connections. -1 **Cognition**, -1 **Motorics**.

Critical: The Janitor's state has become critical and they require immediate aid. Roll 1 **Physique** check every turn or minute, on a fail take 1 hp damage.

Downed: A downed character is on the verge of death and unable to help themselves. Players need to roll a **Physique** check at the start of their turn. If the Player is not **Stabilized** by the time they failed 3 rolls they die.

Stabilized: A stabilized character is returned to 1 HP and can not get more than that through ordinary means. If a stabilized character is injured again they will die.

Incapacitated: The character is restrained and unable to move. Other characters can **Help** the incapacitated. An Incapacitated player may roll a skill check to free themselves, at the GM's discretion.

Burning: Burning creatures or things take -5hp damage minute or turn (whatever is faster). Burning bypasses armor but not resistances.

Poisoned: Poisoned creatures require an antidote or time for the poison to wear off. Poison effects depend on the type of poison.

Backgrounds

Every Janitor has a background. Players are encouraged to flavor their backgrounds how they see fit. If none of them fit the character game masters and players can work out a new one.

Soldier

You served in the army and might have even been deployed. You were recruited because of your ability to follow orders, military training and distant family members.

+1 Motorics

+1 Physique

Trait: Back-pocket

After years in the military you have learned one thing: How to always store that one extra magazine in case you need it. You can store any one magazine on you even if you don't technically have the space for it as long as you wear clothes.

Delinquent Hacker

You were spared jail time because of your knowledge of hacking telecommunications equipment and computers. Chin up kid.

+1 Cognition

+1 Charisma

Trait: Phreak

Is that a plastic flute? You start with a size 1 tool to "hack" payphones and the knowledge how to hack computers giving you **+1** on any attempts to do so.

Thief

One day you stole something you really should not have and the Institute noticed your skills.

+1 Charisma

+1 Motorics

Trait: Sleight of hand

Hey that is not yours. You gain advantage when trying to steal something (use Interface), though I don't know why you would need to do that.

Latent Psychic

You were "recruited" for your latent psychic abilities. Guess those nightmares were real all along.

+1 Mind

+1 Cognition

Trait: Incomparable Mind

Long hours in under the watchful eyes of mirrors in white rooms. You can sense minds from up to 3 meters away.

Office Worker

Your previously worked in the Institute's offices but have been cleared for field work.

+1 Cognition

+1 Motorics

Trait: Just ignore it

Long hours at the institute has taught you not to think about it too much, you get to ignore the first **1 Sanity** lost.

Muscle

Your tendency to always lend a helping hand has landed you here, you probably don't deserve this.

+1 Charisma

+1 Physique

Trait: Helping hand

Again, we talked about this. **+1** to all **Help** rolls.

Janitor

Like an actual one... what?

+1 Charisma

+1 Mind

Trait: I wont clean this

You have seen some shit. You get to ignore pushed Mind checks as a result of viscera or similarly horrifying imagery.

Lab Rat

Being a test subject has mutated you and they probably can't let you go anymore

+2 in any stat

Trait: Mutant

You get to roll (or pick) one mutation from the mutation table.

Veteran

You have seen it all, done it all. Only for experienced players.

+1 Physique

+2 Motorics

Trait: Was it worth it?

You start at **Cleaner** rank (1) but roll for a permanent mental wound.

Blank Slate

Who are you? Only for experienced players.

Trait: Fast learner

You only need one mission to unlock permanent effects of trainings.

Abandoned

Nobody ever cared for you until now. Only for experienced players.

- 1 MIND
- 1 COGNITION
- 1 PHYSIQUE
- 1 MOTORICS
- 1 CHARISMA

Trait: Hidden Talent

Pick one stat, your soft cap is now at 5 for that stat.

Rank

There are 5 ranks for Janitors **Rookie, Cleaner, Liquidator, Handler, Senior** with new Janitors starting at rank 0 (Rookie). Each complete primary and optional objective awards all present Janitors with at least 1 rank point (even in death) and for each 5 rank points they will receive a new rank.

New ranks allow Janitors to access new equipment from the quarter master, because the Institute has learned their lesson and no longer issues rocket launchers to rookies.

Rank requirements can potentially be overridden by the game master if a mission requires a specific tool (like a rocket launcher).

Should a Janitor behave against the Institute's paradigms by either:

- Willfully destroying a contained anomaly without direct order
- Willfully releasing a contained anomaly without direct order
- Excessive, preventable violence
- Excessive, preventable property damage
- Leaking of classified information

That Janitor may be punished by de-ranking and or immediate liquidation (with following re-education after cloning procedures).

Bullshit Points

The Game Master may award bullshit points (or **BP** for short) upon completion of tough missions without losses, dealing with problems in a spectacular way or just thinking creatively. Players can spend a BP to gain advantage on a single roll or retroactively have an item on them that they forgot to bring (if they had space for it to begin with). This has limits and is up to the GM's digression.

Universal Moves

These are moves that any character can do as long as they are not incapacitated.

Face Your Fears:

When you stare into the abyss and the abyss stares back, roll + **Mind - lost Sanity**. Prior to the roll the GM will state a sanity penalty, on a failure you lose this much sanity, on a partial you will lose half, rounded down.

Communicate With The Void

When you are bold enough to try and communicate with the unknown roll + **Mind**. On a success you establish communication as decided by the GM (and the players), on a failure the GM gets to push a narrative consequence (or just **Face Your Fears**).

Make A Guess

When you try and combine clues and prior paranormal knowledge to try and figure out additional information you can roll + **Cognition**. Note that the GM does not have to tell the player everything on a success nor do they need to completely lie on a failure. This is more to add additional intrigue and keep the game going.

Search

When trying to find something or someone specific roll +**Cognition**. Subsequent attempts for the same thing will give a +1 for each additional attempt to the roll.

Sneak

When hiding either through cunning or agility roll +**Cognition** or +**Physique**. +1 for wearing appropriate clothing or camouflage, -1 for wearing inappropriate clothing (needs to be significant like a yellow raincoat on a dark street or black clothing in snow).

First Aid

When trying to help and incapacitated person, stop a bleed or dig out that bullet in a motel bathroom roll +**Cognition**. On a partial you manage to stabilize them, on a full success add +1 hp.

Patch Up

When trying to fix something that is broken roll +**Cognition**.

Talk To The Public

Whenever you need to question a witness, deflect suspicions or pull rank over cops roll +**Charisma**.

Boost Morale

A character that is currently not panicked and try and remove the panicked state from a comrade. Roll **+Charisma**. On a partial you remove the panicked state putting them on 1 Sanity, on a success you gain **+1 Sanity** as well.

On The Double

If you need to get somewhere quick or somewhere that's hard to reach but not impossible (like a long jump, climbing a cliff etc.) roll **+Physique**.

Heave Ho!

When you let your muscles flex to lift heavy objects, break down doors or throw something very far roll **+Physique**.

Dodge!

When you try and save your skin, roll **+Motorics**. You get advantage if in or next to cover. On a full success you avoid all danger, on a partial you take half damage (rounded down). Keep in mind that cover can act like armor and reduce incoming damage.

Get Stuck In!

When you engage in a melee fight roll either **+Physique** or **+Motorics**. On a partial success you still deal full damage but your opponent gets to hit you as well.

Aimed Shots

When carefully aiming and shooting a firearm of any kind establish if you can hit the target then roll **+ Motorics** + the **Accuracy** stat of the weapon and expend ammo according to the **aimed** stat. On a partial success you deal half damage (rounded down). If you roll 12 or higher you either hit a **weak spot** or do double damage.

Short Controlled Bursts

When rapid firing a firearm of any kind establish if you can hit the target then roll **+ Motorics** + the **Control** stat of the weapon and expend ammo according to the **burst** stat. On a partial success half your burst (rounded down) will hit a target. If you roll two sixes you either hit a **weak spot** or do double damage with one round out of your burst (the rest still hit normally).

Mow them down

Call out a number of targets you can hit in the same area then roll + **Motorics** + **Control** and expend one **burst** of ammo with every target after the first requiring one more burst than the previous one (so for 3 targets you expend 6 bursts, this is also called a triangular number). On a partial success half of one burst per target (rounded down) will hit the target, on a success you hit one burst per target and if you roll two sixes you hit a **weak spot** or do double damage with one round on one target (the rest still hit normally).

Suppressive Fire

To suppress an area expend a number of burst decided by the game master. For small areas like windows or doors a single burst is enough for larger areas more might be needed. This should hinder everything with a sense of self preservation from entering that area. Anything that still does should take at least 1 hit of damage. You can't do anything else on your turn other than slowly move to a spot as long as you can still hit the area you are suppressing.

Burn Rubber

When pushing the pedal to the metal, doing stunts on motorcycles or driving a tank through hordes of undead roll + **Motorics**.

Interfacing

When trying to quickly search something on a computer while the world ends around you, lock pick a door or try and type on a touch-pad with bloodied gloves roll +**Motorics**.

Help

Any non incapacitated character that has not yet had their turn can use their action to **Help** another character with their skill check. The player describes how they will help someone else and if the GM accepts it, the helped character gains advantage on their check.

Hinder

Any non incapacitated character that has not yet had their turn may choose to use their action to **Hinder** another character, making it harder for them to get somewhere or do something. For example to stop a panicked character from doing something very stupid. The player describes how they will hinder someone else and if the GM accepts it, the hindered character gains disadvantage on their check.

Rest

Unless in active combat the task force can try and barricade a cleared room to rest (obviously only if the barricade would keep the aggressor out). During this time Janitors can repack all their mags, adjust their equipment and recuperate. Resting restores **+1** Sanity for all resting Janitors.

Resting advances time which can lead to narrative consequences and should not be exploited.

Equipment

Janitors can pick any gear their rank allows as long as they can carry it. There are no class restrictions and players are encouraged to gear up differently based on the briefing for the mission.

Every Janitor has 7 equipment slots:

- Primary weapon
- Secondary weapon
- Head wear
- Armor
- Rig
- Backpack/Tool
- Tool

If an item can be carried in the inventory of another item, for example a small tool in a bag, this item does not need a slot. Think of slots as space on the Janitor to put stuff. Tools can be worn both on the tool slot and the backpack slot unless specified otherwise.

There are a few special clothing options as well, Janitors can only wear one set of those.

The Basics

Every Janitor, unless otherwise mentioned, has access to basic equipment they don't need to list, that does not take up extra space. Janitors can explicitly lose or forgo this equipment but have access to it otherwise.

This equipment includes:

- Clothing for the job, this includes military clothing and disguises, with pockets
- Fake IDs, badges, patches etc. for undercover work
- A wallet with adequate amounts of local currency (for bribes, to buy things or pay for services)
- A pair of gloves
- A fire starter of some kind
- A watch
- A compass
- A map of the area
- 2m of strong parachute line
- A belt
- A individual dosimeter badge. Turns red to indicate dangerous radiation threshold, Janitors should leave the affected area immediately. One time use, not a GM Counter.
- A notepad with pen

Janitors are encouraged to add flavor to the items or add their own flavor items like smokes, jewelry, special clothing choices, etc. If a Janitor picks camo clothing, they must decide on a camo before deployment.

Weapons

Weapons generally come in the form of guns but there are some melee weapons and some grenade consumables.

A ranged weapon has the following stats:

Rank: The rank required to use this weapon

Caliber: The caliber or ammo type of the weapon can use

Accuracy: The accuracy bonus

Control: The control bonus

Aimed/Burst: The amount of shots fired for aimed shots and burst.

Reload: The reload speed of the weapon, some have different speeds depending on the circumstance.

Modifiers: A list of modifiers, this can be equipped attachments, internal magazine sizes or other specialties.

Size: The size of the weapon, this is more important for use in small rooms than scavenging weapons of the battlefield.

As well as a description of the weapon.

Guns don't have a generic damage stat, damage is tied to the ammo used. When outfitting their Janitors, players should note the current magazine and the ammo in it next to the gun.

Weapons that are equipped in one of the weapon slots can be considered to have some form of holster or sling and can be drawn without issue, weapons stored in inventories however take time to be retrieved.

Ammo and Magazines

Ammo is stored in magazines, for game play purposes Janitors don't carry loose ammo and magazines contain only one type of ammo.

Players need to keep track of what magazine contains what and when it's empty. Basic training consists of retaining reloads, so Janitors will hold on to ejected magazines and put them back in their inventory.

Keep in mind that Janitors are not supposed to stay in action multiple days and should not carry that much gear.

Magazines should generally be stored in a rig and not in the backpack and reloads from the backpack take longer.

Shot shells

Shotgun ammunition works a bit different than normal ammo because it fires multiple pellets with every shot. To determine the damage of a shotgun roll the dice designated in the dice stat and multiply the result with the damage and AP stat to determine total damage. Since shells have spread damage rolls are made with advantage at very short range (<10m) and disadvantage beyond effective range (see **Long Ranges**).

Damage And Armor

Not all anomalies can be damaged by conventional means but you sure can. To avoid that Janitors are often provided with various kinds of armor. Basic armor has a durability that essentially acts like an extension of your health bar, reducing attacks until it breaks. However some attacks have an AP value attached to them meaning they can fully or partially bypass your armor.

Damage values are listed like this 2AP1 Damage, this means the attack does 2 damage and has an armor piercing of 1 meaning it deals 1 damage after armor.

For example let's say a Janitor has 3 armor and an attack deals 2AP0 damage. The armor will absorb the 2 damage and gets reduced to 1 but the Janitor does not take damage.

If the same armor is attacked by 2AP1 then the armor would still take 2 damage but also 1 damage bleeds through and is dealt to the wearer. However if we attack a Janitor without armor with the same attack (2AP1) then they would take 2 damage, the AP is not extra damage it's a portion of the damage that passes through armor.

Some heavy armor can reduce incoming AP damage it will usually be listed like this:

Heavy Armor

Armor: 3 -1AP

This doesn't just apply to armored vests Janitors wear. Armor can also represent the toughness of an object like a floating metal cube that is very resilient to damage, hardened skin on a creature or even **cover**.

More on this in the section on how to run combat.

Inventories

Janitors can carry items in gear with inventories like backpacks or rigs.

Each inventory has a max capacity and a max item size denoted in brackets behind it.

For example:

Basic Backpack

Inventory: 6(4)

A basic backpack for test purposes

This means that you can fill it up with items that have a combined size of 6 but no item is allowed to be bigger than 4.

Any item that is not in an inventory needs to be either worn in a slot or held in a hand.

Pockets

Every Janitor has an inventory of 4(1) as long as they wear clothes unless explicitly restricted by the GM (for example if the Janitor wakes up in prison clothes or jeans without pockets).

Weight

Some items are marked as **heavy**. Janitors can only carry 5 heavy items at a time. Should they carry more they become overencumbered and have disadvantage on **Dodge**, **On The Double** and **Get Stuck In Rolls**. Janitors are encouraged to split the load.

Anomalies

Anomalies are at the core of Janitor Squad, you are, after all, here to contain them.

Anomalies come in all shapes, sizes and threat levels but what unifies them is that they don't seem to fit into our common understanding of physics. As such they can be highly volatile and dangerous as they may bend the laws of physics.

The primary task of the Janitors is to find and contain these anomalies if possible and destroy them if not. Mere knowledge by the public of these anomalies could have major consequences and must be avoided at all cost. More information about anomalies, their history and the Institute can be found in the lore section.

To aid Janitors in discovering and containing anomalies, the Institute has developed the TAG system. This system groups anomalies into broad categories with common characteristics.

These groups are not very scientific and anomalies often have more than one tag. As a rule of thumb if a tag can apply, apply it.

The TAG system interacts with other systems in the game. Some equipment is there to track, combat or protect from certain tags and Janitors can help with scientific breakthroughs via the tags as well.

In universe the tags represent physical tags found on the anomaly containers and documentation.

Tag List

Note that a combination of different tags can alter or obscure attributes of the anomaly. Exceptions may apply.

Creature

Containing all anomalies that are or act like living creatures.

- Can be fought with conventional weaponry
- Has at least one **weak spot** that will instantly kill or incapacitate
- Requires an energy source like food
- Usually has a sense of self preservation
- Usually requires oxygen to live
- Can usually be subdued with tranquilizers
- Often can be contained with chains, cages etc.

Containment suggestions: Incapacitate and subdue, keep in locked container.

Examples: The sewer man, night mares, gnomes, John 13, teleporting rats

Plant

Containing plant like anomalies that may react to stimuli but lack more intelligent behavior.

- Can be fought with conventional weapons but small arms are often ineffective
- Spreads via spores or seeds.
- No means of locomotion.
- Roots
- Requires energy source like minerals and sunlight.

- Often weak to fire and poison
- Often requires sunlight

Containment suggestions: Unroot entire anomaly if possible. Only few specimens required for studies, rest can often be destroyed. Examples: The tree that desires blood, flowers that smell of home, the World Root

Pathogen

Containing pathogen like anomalies that spread from one host to another often altering their behavior or harming them.

- Infects host body and causes diseases
- Very resilient to conventional weapons, requires specific medications, poisons or extreme environments to destroy.
- Infected hosts are infectious, often even after death
- Often alters behavior of infected hosts
- Often harms infected hosts
- Infected hosts often try to hide their infection and have strong sense of self preservation
- Multiple potential ways of spreading
- Often hard to detect during incubation stage, requiring specifically made tests.
- Often hard to cure, requiring prophylactic vaccination

Containment suggestions: Quarantine entire area, including Janitors. Treat with extreme caution until further studied. Example: A parasite that turns cows into carnivores, a fungus that makes you funny, a virus that causes computers to gain sentience

Object

Objects are one of the most common types of anomaly, often taking the form of familiar objects but seldom have agency.

- Tied to specific object
- Damaging or destroying the object will destroy the anomaly
- Destroying the anomaly may cause extreme side effects including new anomalies
- Depending on the object material properties, can be very resilient to conventional weaponry

- May have one or more **weak spots** that can cause instant destruction
- Destruction or damaging the object may be virtually impossible in the field (regenerative abilities, very strong)
- Moving it out of it's original context may cause further issues

Containment suggestions: Keep exposure and any interaction with the anomaly to a minimum, place in secure container and monitor behavior.

Examples: A water bucket that always leaks but never empties, a hair dryer that gets hotter than the sun, a book with the entire story of your life, a device that creates a big teleportation bubble

Phenomenon

Phenomenon are often only present in specific locations and time frames but lack any form of will or volition. Since they can be created by other anomalies, Janitors should observe the area after recognizing a Phenomenon.

- Field of anomalous physics
- Can be tied to or created by other anomalies
- Often very hard to destroy if at all possible
- Disruption can cause knock on effects
- Sometimes very hard to detect depending on the effect

Containment suggestions: Call HQ for an in situ containment setup. Lock down the area and deal with potential witnesses.

Examples: An area where pi is 3, a normal street that always smells like olives for no reason, a big bubble that teleports everything inside through space time, a portal to another dimension

Memetic

Memetic anomalies often imprint themselves in the minds of personnel that interacts with them. Mere knowledge of a memetic anomaly can pose a threat and while often having an origin point they can spread very quickly. Extreme caution is advised!

- Spreads via thought
- Often originating from an object or location, although those may not be anomalous themselves

- Often similar to pathogen type anomalies although psychological instead of physiological
- Mere mention can cause infection
- Does not live, can not be killed
- Destroying origin often not enough

Containment suggestions: See Memetic Containment Protocol.

Example: REDACTED, a book that makes you want to kill JFK, the song you can't forget, REDACTED

Memetic Containment Protocol

1. Loudly state "Memetic" to your team members
2. Rip out the memetic plug out of all radio equipment, this will send the memetic warning and render the radio inoperable
3. Reduce communication to a minium
4. Do NOT talk about the anomaly directly
5. Use evasive techniques to deal with potentially memetic material (glancing, short exposure, closed eyes etc.)
6. Suspicious media is to be contained immediately or destroyed
7. Observe your team, look for signs of memetic poisoning, remember D.I.M.E. (**D**esire to communicate, high **I**nterest, **M**emory loss, **E**motional instability).
8. Keep anti memetic options ready (drugs, cyanide, gun)

Safety Classes

Different anomalies provide different challenges when it comes to containing them. To gauge the containment difficulty the Institute uses 3 different classes:

Class N – Nominal

N Class anomalies require little to know active containment and can often be stored in common containers. Treat them like a loaded gun.

Class M – Moderate

M Class anomalies require more effort to contain. Almost all creature type anomalies fall into this category. They often require specialized rooms and containment procedures. Treat them like an unknown person with a loaded gun.

Class S - Significant

S Class anomalies require a significant effort to contain them, this may be because the anomaly actively resists containment or simply because it is very large. Treat them like a tank shooting at you.

It should be noted that these classifications concern containment. They do not indicate threat level.

The Game Loop

Game sessions of Janitor Squad are divided into 3 phases, briefing, deployment and downtime. The game is designed to be played in 2-3 hour long sessions and both briefing and downtime can be done in between sessions via faxing or carrier pigeons for more convenience.

Tip for GMs: Try to avoid grand and overarching narratives or big baddies that pull the strings, that will ultimately stifle your flexibility in mission design and means that players can't easily drop in or out. Keep in mind that this system is designed around the idea of experiencing short and weird scenarios. If an anomaly is bigger or more difficult than expected, let Janitors retreat and regroup and try next session instead of forcing a resolution.

Briefing

Although the shortest phase this should also include relevant information for the players and should preferably be written down somewhere so players can reference it later (like a fax or similar). Think of the briefing as the hook or elevator pitch for the next session, it should mention the current situation as known and how the Institute got aware of it. Most of the time the Institute isn't the first to discover an Anomaly and missions are time sensitive to not expose more of the public or protect them.

The briefing should also give the Janitors a general idea of the environment they are working with, if special equipment is required and what kinds of cover they will use if any.

Tip for GMs: Police reports, missing person cases or even fringe magazines are all good ways the Institute could come across a new anomaly.

Deployment

This is the main part of the game and the longest. Janitors will be deployed to an area of potential anomalous activity and need to search for evidence of it. Once the anomaly has been detected and been confirmed anomalous (the Institute does not care for non anomalous events) they are to contain or destroy it. Smaller anomalies can be put in containers and simply brought back to base but for larger ones they are to radio in their findings via the radio in their vehicle. Keep in mind that the Janitors have the full backing of the Institute and M and S class anomalies can almost never be secured by the team alone. However for the containment teams to show up the Janitors need to actually confirm and witness the anomaly, that is their job after all.

Downtime

Once the Janitors made it back to HQ in one way or another the downtime phase begins. This should start with a debriefing, tallying up the Janitors accomplishments, letting players speculate about the nature of the anomaly etc. Depending on the outcome players should also be informed about what happens next. If a containment team was called, what will be their challenges, how will witnesses be handled and what damage did the anomaly cause.

Any completed objectives should reward at least one rank up point to all present Janitors, even those who died.

Afterwards the "Research Points" for the anomaly get calculated based on tags and all present players get to vote on what research focus these points should be spend on.

Then treatment is handled, injured Janitors get treated, get to choose therapy or even get cloned if they died.

Last but not least players get to pick a training (if they have time) and earn the benefits from previous training regiments.

Science And Research

It is the main reason why we are all here after all. While most research going on at the Institute may not be of direct use to Janitors, returned anomalies may offer vital information about it's weaknesses or even help create new tools to deal with similar anomalies in the future.

To help squads in decision making, the Institute has developed the **Research Point** system.

After each mission Janitor squads receive an amount of RP per Tag they then can use to dictate research focus.

Research points are per Tag:

1. Every distinct anomaly with the same tag gives 1 point if the tag was deduced, if not they give 0.5
2. Multiply result with the class multiplier (1 for N Class, 2 for M Class and 3 for S Class anomalies)
3. Multiply result with containment multiplier (0.5 for total destruction, 1 for partial destruction/containment, 1.5 for full containment)
4. Add bonus (0-3) for special circumstances (large amount of anomalies, surrender of anomaly, containment in adverse conditions etc.) decided by game master
5. Round down

For example the team is up against a class N object/phenomenon anomaly. They deduce that it is an object and contain it, giving the container the object tag.

So we first calculate the object research points like this:

1. Since they have one anomaly and deduced the tag correctly they start with 1 point (1).
2. It is a class N anomaly so we multiply by 1 (1).
3. They fully contained it so we multiply by 1.5 (1.5).
4. The GM decides on no bonus (1.5).
5. We round down (1).

This gets us 1 point for object research.

For the phenomenon research we do the same but start with 0.75 since the players did not deduce it which results in a 0 (0.75 rounded down).

So the Janitors get 1 object research point to spend.

Let us look at another example. In this one the group fought a bunch of creature anomalies, most are completely destroyed by fire but there are 3 corpses that are in "good shape". The team deduces creature/contagion.

We first calculate for the creature tag:

1. It is one distinct anomaly (even if we have multiple creatures they are of the same kind) and they deduced the tag so we start with 1.
2. It is a class M anomaly so we multiply by 2 (2)
3. We multiply by 1 for partial destruction (2)
4. The GM decides to give a bonus of 1 because there were so many (3)
5. We round down (3)

So the team gets 3 creature research points, they don't get any contagion points because it wasn't one.

Squads can "spend" these research points to "unlock" scientific advancements and Institute upgrades (see the **Research Focuses** in the Compendium).

Players don't spend points on their own, since all unlocks are Institute wide for all current and future Janitors all players get to vote on were to spend these points.

Tips for GMs: The research focuses provided are not meant to be exhaustive, especially not if you add your own gear and weapons. If there are recurring anomalies or tags maybe add specific research focuses to combat or contain them.

Treatments

Since the missions Janitors get send on are routinely dangerous (some might say suicidal) injuries are to be expected. Injuries come in three variants, physical, mental and death.

Physical Wounds

Thanks to top of the line staff and experimental methods the Institute can heal even the gravest of wounds, usually.

If a Janitor makes it back to HQ with a physical wound, they are considered stabile and out of immediate danger. To determine treatment outcome the player rolls on the **Physical Treatment Table**.

Mental Wounds

The Institute cares greatly for their employee's health and offers mandatory, weekly sanity checks.

To treat mental wounds, the Janitor must choose to forgo optional training regiments and instead focus on therapy. To treat a mental wound 3 intense therapy sessions are required and this only helps alleviate the symptoms usually.

However there are some drastic options. A Janitor may choose to or be required to take an anti memetic treatment after a mission, if this mission is the cause for the mental wound they will forget it along with everything else that happened during it. In this way it functions similar to death but without the physical complications.

Death and Cloning

Death is not the end for a worker of the Institute.

After every mission Janitors will undergo a memory fixing procedure where their memory is stored temporarily using anomaly A#98. Should a Janitor die in the field a clone is made using [DATA EXPUNGED] and A#98 creating a facsimile of the Janitor, this process is however not perfect and can lead to various anomalous mutations. Since the use of [DATA EXPUNGED] will result in the Janitor clone becoming anomalous they pose a potential risk of

revealing anomalous information to the public be that willingly or not. As such extra care is to be taken regarding them and remains are to be recovered or destroyed.

In game play terms this means that Janitors will be cloned after they die, however they will lose all progress that happened during the mission that includes all benefits from training. Rank ups will however remain. After cloning the player gets to roll on the **Mutation Table** to figure out what changed. Mutations do not stack and the Janitor is cloned from their initial biometric sample from the start of the campaign. This means physical wounds are gone however mental wounds may remain if they were still present in the last memory sample.

If a player rolls a mutation they already have they get to roll again.

Any mutations that look strange or non human will result in undesired attention from outsiders and must be hidden.

Training

Janitors can pick from different training regimen to undergo before the next mission. Training will only take hold after completing a mission, should a Janitor die and get cloned, since they have no memory of the mission they also do not benefit from the training.

Psychic Conditioning

White rooms and restless nights. **+1 Mind after next mission.**

Workout Routine

Drop down give me 100. **+1 Physique after next mission.**

Lab work

No wait why are you here. **+1 Cognition after next mission.**

Team building

A happy squad is a good squad. **+1 Charisma after next mission.**

Mechanic Workshop

Red to red, blue to...wait blue? **+1 Motorics after next mission.**

Intense Training

A Janitor can subject themselves to intense training to raise above normal limits but at the cost of something else. Gain **+1** in any one stat above 3 but lose -1 in another after next mission.

Killhouse Drills

Check those corners. + 1 **Control** for the next mission. If taken 3 times in a row without dying, the Janitor will get the **Controller** trait letting them use the **Control** stat for any ranged attack.

Range Shooting

Tight groupings. +1 **Accuracy** for the next mission. If taken 3 times in a row without dying, the Janitor will get the **Mad Minute** trait letting them use the **Accuracy** stat for any ranged attack.

Sniper Shooting

Aim for the heart not the head. For the next mission the **aimed shots** critical success triggers on a 10 instead of a 12. If taken 3 times in a row without dying, Janitor will get the **Sniper** trait unlocking this ability permanently.

Machinegun Training

It's a MACHINE gun. For the next mission the Janitor will get +1 to the **Mow Them Down** roll. If taken 3 times in a row without dying, the Janitor will get the **Machine Gunner** trait, requiring on burst less per target after the first target (so the second target needs one burst instead of two etc).

Reload Drills

Like all the cool mercs from the magazines. For the next mission weapons reload 1 speed faster (not including impossible or short). If taken 3 times in a row without dying Janitor will get the **Wasteful Warrior** trait allowing them to reload weapons with detachable magazines by dumping the old one on the ground. Impossible reloads are still impossible, minimum reload speed is short and this does not work with internal magazines.

Advanced Handgun Conditioning

Saw that in a movie once. For the next mission Janitor gains +1 to any combat roll made with a **handgun**. If taken 3 times in a row without dying the Janitor will get the **Abidextrous Assault** trait, letting them dual wield handguns at -2 accuracy and a reload speed decrease.

Medic Training

Learn all about morphine. For the next mission you gain +1 on **First Aid** rolls . If taken 3 times in a row without dying the Janitor will get the **Medic trait**, unlocking the ability permanently.

Advanced Driving Course

No the brake is LEFT. For the next mission you gain **+1** on **Burn Rubber** rolls. If taken 3 times in a row without dying the Janitor will get the **Stunt Driver** trait, unlocking the ability permanently.

Handling Setting And Environment

When creating your campaign or missions keep in mind the larger setting of Cold-War East-Germany. Tensions between the East and West were high and things like anomalies could have major ramifications. Even within the country itself multiple powers are at play that all have their own agendas. Anomalous activity could be mistaken for Western sabotage or maybe they even are. The GDR is obviously not the only power with an agency like the Institute.

Because of it's historical context the GDR is also technologically behind the rest of the soviet union and is quite isolated from Moscow. As such the Institute has to often repurpose gear or make their own and thanks to the anomaly research it can be considered to have the most advanced tech in the country. However this also puts a target on it's back and this tech needs to be concealed or else people will quickly start asking questions.

When after an anomaly has been dealt with the issue of potential witnesses needs to be addressed. Now the Institute generally refrains from killing them because that would often lead to more questions, so you and the players will need to come up with cover-up stories for the wider world. Maybe it was a gas leak, a military exercise or even enemy action. While the Institute can deploy anti-memetic agents on a larger scale, this is usually not advised and can lead to knock on effects.

If you and your players are like me then they like the cold war setting because of it's weird and niche tech. Designs that didn't really went nowhere but that you look at and go "ah neat". As such you probably have your own list of specific things (and let's be honest many of them are probably firearms) and look at my list of equipment and go "wow this is lame where is my [insert forgotten weapon]?". But fret not through the power of our imagination we can get around this issue.

The base equipment catalog is there to not overwhelm players and GMs with a myriad of basically identical options. At some point the simplified nature of the game has it's limits and it's very hard to differentiate them. At some point this list had a PPK in it shooting .380ACP, that would basically have the same stat block as a Makarov but different ammo and I decided to remove it.

Now if you or your players want a specific thing, feel free to add it or even replace something existing with it, there should be enough items to orient yourself on how to handle it's stats.

This also includes special custom versions of gear. Players may want to customize a gun they like past the given attachment options or exchange it with a similar gun they like from a game or movie. However keep in mind the time frame and the feasibility of this. The Institute can probably easily put a front grip on a gun but probably wont use anomalous research to make a red dot sight or invent the USP. For progression reasons this should also be restricted to rank 2 and higher.

Environments

Janitors are generally send to investigate an area. As a Game Master you should not only have a room with the entity in it, make the thing believable, is it an abandoned hospital, a forest or a military base, have areas with clues or rooms the team can barricade if need be.

Try to think of missions less as a combat encounter and more as a puzzle the players need to solve, that puzzle can involve combat but it's generally more interesting if it isn't the only thing.

Some example to make things interesting and raise the stakes:

There is a civilian witness, how will the players deal with that. A police officer investigated the scene and has gone missing risking further scrutiny of our work.

The entity has turned a Janitor against the others.

Other than adding flavor, the environment can also create challenged for your players. Maybe the building is condemned and a wrong step can send your falling down to the next floor.

Maybe toxic gas requires gas masks and makes seeing hard giving players disadvantage to rolls.

Cramped environments could make it hard to use long weapons giving disadvantage to attack rolls making sidearms or weapons with folding stocks a boon.

Or maybe it's just dark, that's pretty scary.

Handling Anomalies

When coming up with new anomalies for the game, try to avoid overly big or world changing ones (so nothing above S class).

While these might sound imposing and can be fun to read about they seldom make for fun encounters.

It is one thing to write a fun anomaly, it is another to think of

how this anomaly was actually discovered or contained in the first place.

Once you have an initial idea or inspiration for one think about how it will be discovered for the first time and the consequences of that. The Institute rarely is the first one to discover them and initial exposure can be quite threatening for all involved parties.

Try to imagine how the anomaly could be contained or destroyed and avoid those that can't, this is, after all, a game about doing exactly that. That does not mean that there can't be anomalies that can't be contained or destroyed but these should not be world changing events, the timeline should still, more or less happen as it did in real life.

Furthermore think about fun strengths and weaknesses for your anomaly, and incorporate the Tag system. It might be tempting to make every creature into some unkillable beast that cleaves through Janitors like butter but that probably does not make a for a fun session.

Keep in mind that not every mission is successful and it can happen that either all Janitors die or an anomaly escapes or breaks containment. Think about those consequences while designing the mission. If an anomaly escapes or the Janitors fail the mission, maybe the anomaly reappears in a later one or maybe it is gone forever.

Think of the game and session like a horror-mystery show where most sessions are contained episodes with a new case to be solved. As such most scenarios usually start with the Janitors looking for clues and asking witnesses, then tracking the anomaly down and in the end trying to figure out how to contain or destroy it. While this is a mystery, not everything will or can be explained. Especially in regards to the anomalies. You do not have to come up with in depth explanations where they come from or how they work in detail, doing so would rob them of their "mystique". The in universe reasons are both because the Institute simply doesn't know and because Janitors aren't told everything.

Try to vary anomaly types and their threat levels, not every session needs a combat encounter. Especially with memetic anomalies it is often about how they mess with the Janitors. When handling the effects of memetic anomalies, you as the GM are very powerful because you hold the power of what actually happens. However don't just simply turn Janitors into NPCs and steer them yourself, instead try to envision how the events would play out for the effected characters. Ask players what they want to do and

then present their characters as trying to do so, or thinking they are but are actually not.

For example, let's say there is a radio that plays a song that makes you want to dance and listen to it. Describe how it makes the Janitors feel like they don't want to leave. Once the players catch on and try to leave, have them do so but maybe only one of them actually makes it out and the rest fall behind. Maybe they think they forgot something, maybe they leave and drive away and after half an hour of driving they are back next to the radio. If someone tries to turn off the radio, maybe someone else turns it on a minute later during a different scene.

If you take over control, do it briefly, like when you accidentally end up at your old job or school even though you wanted to go to the store, because they share a similar path and you were lost in thought and just went there on auto pilot.

Handling Combat

GMs seldom need to roll for NPCs that attack players. They do whatever the game master says they do (please keep in mind that this is an exercise in communal story telling and not a PVP battle). If an NPC attacks a player the game master will first determine the type of attack and then how easy it is to evade said attack. Janitors either avoid damage by being in full cover or evading using the **Dodge** move. Players should get advantage on the roll if the attack is easier to avoid (like long distance fire, being already partially in cover etc.) and players who are in cover should not have to make rolls unless the attack goes through said cover and if so take less damage from it since the cover acts as more armor.

If the attacker uses a gun similar to the ones found in the compendium, game masters should attack players similar to the combat rolls. For example if an enemy agent shoots single shots at them, a partial success dodge results in half damage from that one bullet. But if that agent shoots in bursts, use the short burst partial where it is half the burst rounded down, so out of 3 rounds only one round would hit (instead of 1.5 rounds).

Try to give players tells before springing large damage numbers on them. If a sniper is aiming at them, maybe have them spot the scope glint and give them advantage on the dodge, maybe the first shot misses them and they get a second to run for cover. Maybe the monster smashes the wall they hide behind first before attacking them. Attacks should not come out of nowhere and players should be able to react to them. If it's an ambush consider having the

first damage roll be low to raise the stakes instead of immediately killing a player.

Janitors are encouraged to think of their survival state as the humble onion. To not get injured, don't get shot, to not get shot, don't get acquired, to not get acquired, don't get spotted.

Killing Janitors

Since this game is explicitly about being in an expendable suicide...team, that cleans up the mess and often has to figure out what they are dealing with on the fly, player character death is to be expected.

However keep in mind that these players are here to play the game so try and not kill them immediately and let them still partake in the game during discussions etc.

Long Ranges

According to Institute statistics most combat encounters happen at short range but there are obviously outliers.

Most of the weapons in the game are effective at long ranges, to give an example, an Ak 74 has a "Battle Zero" for 440m meaning the shooter is able to hit a standing target anywhere between 0 and 440m using this setting. So unless a target is much further away combat rolls should be handled normally. Above effective range (around 500m for most rifles give or take) attacks should be rolled with disadvantage (or players should get an advantage trying to dodge). Above 1km most weapons can only really be used to suppress enemy positions and should rarely be attempted.

However for pistols and shotguns (using shot) ranges matter much more with most not exceeding an effective range of 50m, anything beyond that should incur penalties and anything above 100m should not be attempted.

There are no explicit ranges given for every weapon and it is left to the digression of the game master and players to decide if a target is within effective range.

Suppression And Collateral Damage

Any shot that doesn't hit the intended target will still hit something. Depending on the environment this can have drastic consequences and endanger Janitors and other People.

That being said some anomalies can be suppressed via gunfire. If a hostile is sentient and possesses even just a basic sense of self preservation, nearby bullet impacts and can keep them in cover or risk getting shot. As the game master you should keep in mind the head space of whatever it is the Janitors are currently shooting

(if it has one) and how it would react to incoming fire.

A strong and well armored creature may weather the hail on gunfire and push through, a lone gunman may hide or surrender and a mind controlled civilian may walk into the line of fire to create a distraction.

Bullets may also disrupt or worsen other anomalies, maybe they get stopped in mid air or bounced back. Think of combat encounters not just as an exchange of damage.

Lore Primer

During World War 2 as detection and communications equipment rapidly advanced and the whole world was shaken by the steps of a million boots more and more nations noticed strange anomalies. These were initially chalked up to faulty equipment, edge cases counter intelligence or soldiers just making things up but over time they became hard to ignore.

It is then that the first versions of the Institute were started, originally fringe science units without much funding, in the off chance that they could find something that could change the war in their countries favor. These units were often kept secret both for strategic reasons and embarrassment.

Post war most nations stopped this research however the powerful players of the cold war kept them going in secret, knowing that their opponents were too. However what initially started as an attempt to weaponize these anomalies would quickly be met with the realization of their unpredictability and the amount of chaos the widespread knowledge of them would cause.

The Institute

The Institute, officially known as the "Institut für Wasserschutz Brandenburg" is situated in a nature reserve in the Brandenburg lake area in East-Germany, and was founded in 1969 as an offshoot of its Soviet counterpart. The gray concrete building looks unimposing for potential onlookers and the first floor informs visitors of the local flora and fauna.

However the real reason for its existence is found in the 4 sub levels which contain a state-of-the art research facility, at least for 1981 East-Germany. What looks like large water tanks from the outside are actually large containment areas for anomalous creatures and plants.

The building also contains habitation and leisure facilities for most of its workers, because most of them can not live among ordinary citizens anymore, for one reason or another.

A nearby troop training facility serves as an airfield for quick deployment across the country.

The Institute is extremely secretive, not even the state really knows the extend of it's research, which results in an ongoing power struggle with various other agencies, especially the Stasi.

The Stasi

The "Ministerium für Staatssicherheit" or Stasi as it's colloquially known is the secret service of the german democratic republic. It's main MO is the acquisition of information and so it sits on a spiderweb of informants, listening posts and spy cells, spying on everything and everyone. If you drop a fork in the GDR, someone in Lichtenberg will know.

As such it is the internal rival of the Institute which tries to protect knowledge it seems dangerous and the two often clash with the Stasi allegedly trying to break into the Institute multiple times to extract information.

The Stasi is looking for any way to get the state to dissolve the Institute and as such Janitors need operate extra carefully, especially if Stasi agents are present, any misstep could lead to loss of influence in the play for power, especially with the rift in the relationship between the GDR and the Soviet Union (and with that the Soviet counterpart to the Institute).

Institute Doctrine

Every member of the Institute pledges to uphold it's doctrine.

- **Protect communism and it's workers from dangerous anomalies**
- **Contain anomalies and their knowledge**
- **Study anomalies to advance humanity**

Failure has consequences. Tueri periculosum scientiam.

Holey Universe Theory

One of the possible explanations positioned by some Institute researches is the "Holey Universe Theory". It suggests that because of the sheer scope, age and speed of the universe the "fabric of reality" has become "holey" and so there exist tiny pockets in space time where physics do not work the way we know them to.

However this theory is wildy disputed by other scientists of the Institute.

Compendium

A list of items and other things for the default setting of 1981 East-Germany.

Wounds And Treatments

Physical Wounds

Roll d100	Wound type	Effect
1-5	Missing Arm	Incapacitated; Critical; -2 Motorics; Disadvantage on all rolls needing an arm;
6-10	Missing Leg	Incapacitated; Critical; -2 Physique; Disadvantage on all rolls needing a leg;
11-15	Major Concussion	-2 Cognition; -1 Mind; Disadvantage on all rolls;
16-30	Minor Concussion	-2 Cognition; Wears off;
31-40	Broken Arm	-1 Motorics; Disadvantage on all rolls needing an arm;
41-50	Broken Leg	-1 Physique; Disadvantage on all rolls needing a leg;
51-60	Broken Rib	Disadvantage on all combat rolls;
61-65	Injured Eye	Disadvantage on all combat rolls; Disadvantage on scout rolls. (2 injured eyes results in permanent blindness)
	Internal Organ Injury	Critical; Disadvantage on all rolls
66-70	Blinded	Disadvantage on all rolls. Wears off.
71-75	Deafened	Disadvantage on all rolls. Wears off.
76-85	Sprained Ankle	-1 Physique
86-100	Strong Bleeding	Critical

Physical Treatments

If a requirement is not met, use conventional treatment instead.

Roll 1d10	Type	Requirements	Effects
1-4	Conventional		Use of conventional but cutting edge medicine. Lost limbs are replaced by capable prosthetics, can not restore lost eyesight. -1 Physique ongoing for the next mission.
5-6	Anomalous	Plant/Creature Hybrids	Anomalous medicine has restored or regenerated bodily functions with almost no adverse side effects
7-10	Mutation	Advanced Mutation Research	Anomalous medicine has restored or regenerated bodily functions but caused a mutation with it, roll on the Mutation Table

Mental Wounds

Roll d100	Wound type	Effect
1-25	Depression	The Janitor develops severe depression -1 Mind -1 Charisma
26-45	PTSD	The Janitor suffers -5 Sanity as a response to a trigger based on the circumstance that caused the mental wound

Roll d100	Wound type	Effect
46-65	Migraine	The Janitor suffers from constant migraines -1 Cognition unless using painkillers
66-70	Catatonia	The Janitor is exhibiting catatonic behavior perceived as strange by others -1 Charisma
71	Anterograde Amnesia	The Janitor has troubles making new memories and struggles to retain information. Incapable of training.
72	Retrograde Amnesia	The Janitor has troubles remembering the past. Past trainings are no longer in effect.
73-83	Auditory Hallucinations	The Janitor hears voices and other sounds that are not there.
84-89	Visual Hallucinations	The Janitor perceives things that are not there, movement in the corner of their eyes, silhouettes in the distance, etc.
90-94	Insomnia	The Janitor has trouble sleeping. -1 Cognition, -1 Physique, -1 Motorics

Roll d100	Wound type	Effect
95-100	Paranoia	The Janitor feels watched or followed. Max Sanity is now 5 and the Janitor starts every mission nervous.

Mutations

If Advanced Mutation research is unlocked, players can opt to roll again but must take the second result.

Roll d100	Mutation Type	Effects
1-3	Nominal	No apparent effects from cloning.
4-10	Polydactyly	The Janitor has gained another pair of fingers. +1 Motorics
11-16	Allergy	Adverse response to common substances, ranges from mild irritation to death.
17-20	Gills	Janitor can breathe underwater but also is no longer protected by ordinary gas masks and requires a full hazmat suit
21-22	Voidvision	The Janitor can no longer see with their eyes but has boosted mental aptitude, capable of sensing phenomenon type anomalies. +2 Mind +2 Cognition Disadvantage on all rolls requiring eyesight.

Roll d100	Mutation Type	Effects
23-26	Bioluminescence	Janitor can make their skin glow in the dark.
27-31	Hollow Bones	Bird like bones that drastically reduce weight while maintaining muscle mass allows the janitor to be a lot more agile and jump higher but at the cost of being more fragile. +2 Physique; -2 HP
32-36	Prehensile Tail	A tail that allows for grabbing or manipulating objects. +1 Motorics.
37-40	Drastic Height Change	The Janitor's height has drastically changed. Flip a coin. Heads, the Janitor gained 30-60cm in height. Tails the Janitor lost 30-60cm in height
41-45	Owlsight	The Janitor has enhanced low light vision and distinct owl like eyes and a 180 degree head swivel.
46-54	Body Change	The Janitor has developed a cosmetic mutation with no noticeable change to their aptitude. This can range from looking like a different human or developing non human mutations like feathers or scaly skin
55-60	Hornskin	The Janitor develops very durable (but dry) skin on large parts of their body giving them 1 AP against melee attacks.
61-66	Psychic Sensitivity	The Janitor has developed a heightened sense towards anomalies. +1 Mind
67-70	Diminished Senses	The Janitor has lost cognitive ability. -1 Cognition

Roll d100	Mutation Type	Effects
71-76	Muscle Mutation	The Janitor's muscle system has changed. Flip a coin; Heads, The Janitor gains +1 Physique; Tails, the Janitor loses -1 Physique.
77-80	Snake Fangs	The Janitor develops snake like fangs and poison glands but loses most of their other teeth within the next 2 weeks.
81-85	Reinforced Ribcage	The Janitors rib and backbones are sturdier and take up more space protecting their internal organs but limiting physical activity. +2 max hp; -2 Physique
86-89	Claws	The Janitor has developed hard claws on their fingers giving them an unarmed attack of 2.
90-92	Squidskin	Squid like skin capable of mimicking environmental patterns serving as active camouflage. Limited by gear and clothing.
93-97	Errand Memories	The Janitor remembers things that were not changing their background and starting aptitude scores.
98-99	Extra Mutation	Roll two more times, only take this action once.
100	Mental Trauma	The cloning has caused mental trauma, roll on the mental wounds table.

Weapons

Light Automatic Rifles

Light automatic weapons firing mostly intermediate rounds. Includes assault rifles, carbines and sub machine guns.

MPi KMS-72

Rank: Rookie

Caliber: 7.62x39mm

Accuracy: 0

Control: +1

Aim/Burst: 1/3

Reload: Moderate

Modifiers: Dovetail, Folding stock (-2 Size, -1 Control when folded), Bayonet mount

Size: 10

East german variant of the AK 47, comes with a distinct "coat hanger" folding stock. Standard issue.

SKS IS

Rank: Rookie

Caliber: 7.62x39mm

Accuracy: 1

Control: 0

Aim/Burst: 1/2

Reload: Moderate

Modifiers: 10 round internal Magazine; Stripper clip reload; Folding stock (-2 Size, -1 Control when folded); Bayonet mount

Size: 10

Custom Simonov carbine with folding stock for better concealment. Semi automatic.

Mpi-41

Rank: Rookie

Caliber: 7.62x25mm Tokarev

Accuracy: 0

Control: +2

Aim/Burst: 1/10

Reload: Moderate

Modifiers: None

Size: 7

Classic soviet sub machine gun from WW2. High fire rate and a strong round make this a strong foe.

MP 40

Rank: Rookie

Caliber: 9x19mm Luger

Accuracy: 0

Control: +1

Aim/Burst: 1/5

Reload: Moderate

Modifiers: Folding stock (-2 Size, -1 Control when folded)

Size: 7

Nazi sub machine gun still in many reserve inventories.

AKS-74UN

Rank: Cleaner

Caliber: 5.45x39mm

Accuracy: 0

Control: +2

Aim/Burst: 1/4

Reload: Moderate

Modifiers: Dovetail, Folding stock (-2 Size, -1 Control when folded)

Size: 8,

Carbine version of the AK-74 popular with law enforcement and spec ops. Works better in closed environments than it's big sister.

M16A1

Rank: Liquidator

Caliber: 5.56x45mm

Accuracy: +2

Control: +2

Aim/Burst: 1/3

Reload: Moderate

Modifiers: Bayonet mount for US bayonets

Size: 11

Captured US service rifle, while more accurate than the MPi K, we lack attachments for it.

A0-46

Rank: Liquidator

Caliber: 5.45x39mm

Accuracy: -1

Control: +1

Aim/Burst: 1/4

Reload: Moderate

Modifiers: Folding stock (-2 Size, -1 Control when folded)

Size: 6

Prototype carbine from TsNIITochMash. The magazine doubles as a pistol grip sacrificing almost everything for overall length. Can't accept a silencer.

MPi KM-72 Pallad

Rank: Handler

Caliber: 7.62x39mm / 40mm Pallad Grenade

Accuracy: 0

Control: 0

Aim/Burst: 1/3

Reload: Moderate/Moderate (rifle/launcher)

Modifiers: 40mm under barrel grenade launcher with up to 400m range (aim only).

Size: 12

Heavy

KM-72 with polish "Pallad" grenade launcher. The added weight and bulk makes the rifle harder to use. Lacks a dovetail mount for optics.

Heavy Automatic Rifles

Automatic rifles firing high power rounds while sacrificing mobility. Includes battle rifles, machine guns and other heavy automatics.

RPK

Rank: Cleaner

Caliber: 7.62x39mm

Accuracy: 1

Control: 0

Aim/Burst: 1/5

Reload: Moderate

Modifiers: Bipod (+2 Control when deployed)

Size: 12

Heavy

Light machine gun variant of the AK 47, accepts 7.62 AK magazines

DP-28 Institute Special

Rank: Liquidator

Caliber: 7.62x54Rmm

Accuracy: 1

Control: 1

Aim/Burst: 1/5

Reload: Short/Long (Top up/ Full reload)

Modifiers: Hopper fed, accepts six 5 round stripper clips

Size: 10

Heavy

Abomination. Modified from surplus WW2 guns, the plate magazine was swapped for a hopper feed to decrease bulk, the barrel was shortened and a fore grip was added to help with hip fire. Uses 5 round stripper clips.

G3

Rank: Handler

Caliber: 7.62x51 NATO

Accuracy: +2

Control: -1

Aim/Burst: 1/3

Reload: Moderate

Modifiers: None

Size: 11

Heavy

Captured West-German service rifle firing the powerful 7.62x51 NATO round. Hard to control during automatic fire.

TKB-059 Prototype

Rank: Senior

Caliber: 7.62x39mm

Accuracy: 0

Control: -1

Aim/Burst: 3/9

Reload: Moderate

Modifiers: 3 Barrels

Size: 10

Heavy

Triple barrel assault rifle prototype, firing all 3 barrels at once. Because of the special barrel arrangement, no muzzle devices can be equipped.

Marksman Rifles

Rifles meant for accurate shots over long distance with powerful ammo.

SKS PU

Rank: Rookie

Caliber: 7.62x39mm

Accuracy: 2

Control: 0

Aim/Burst: 1/2

Reload: Moderate

Modifiers: 10 round internal Magazine; Stripper clip reload; Integrated optic

Size: 11

Marksman configuration of the Simonov rifle, features an integrated sniper scope.

SG 91/30

Rank: Rookie

Caliber: 7.62x54Rmm

Accuracy: 3
Control: -2
Aim/Burst: 1/1
Reload: Moderate
Modifiers: 5 round internal Magazine; Stripper clip reload;
Integrated optic
Size: 12
Sniper rifle version of the Mosin-Nagant or Three-Line-Rifle.

SVD

Rank: Liquidator
Caliber: 7.62x54Rmm
Accuracy: 2
Control: -2
Aim/Burst: 1/2
Reload: Moderate
Modifiers: Dovetail mount, Bipod (+2 Control when deployed),
Bayonet lug
Size: 12
Contrary to popular belief, it's not just a long AK.

Shotguns

Smoothbore guns for close range engagements accepting a wide array of special ammo.

Mts 20-01

Rank: Rookie
Caliber: 20 gauge
Accuracy: +1
Control: 0
Aim/Burst: 1/1
Reload: Moderate
Modifiers: Smoothbore
Size: 10
Soviet bolt action shotgun. Popular with civilians, it's large caliber makes it useful for special ammo.

Mts 21-12

Rank: Rookie
Caliber: 12 gauge
Accuracy: +1
Control: +1
Aim/Burst: 1/2
Reload: Short/Moderate
Modifiers: Smoothbore, Internal magazine 4+1
Size: 9
Ubiquitous semi automatic shotgun from the 60s.

Sawn-Off

Rank: Rookie

Caliber: 12 gauge

Accuracy: -1

Control: -1

Aim/Burst: 1/2

Reload: Short

Modifiers: Smoothbore, Internal magazine 2, One handed

Size: 3

Sawn-off version of an double barrel hunting shotgun.

Handguns

Guns that can be easily used with one hand like pistols or small sub machine guns.

Makarov

Rank: Rookie

Caliber: 9x18mm

Accuracy: 0

Control: +2

Aim/Burst: 1/4

Reload: Short

Modifiers: None

Size: 2

The ubiquitous Makarov pistol found in every police station in the soviet union. The lower power cartridge make it easy to control and it is surprisingly accurate.

TT-33 Tokarev

Rank: Rookie

Caliber: 7.62x25mm Tokarev

Accuracy: +2

Control: +1

Aim/Burst: 1/2

Reload: Short

Modifiers: None

Size: 2

The ubiquitous Makarov pistol found in every police station in the soviet union. The lower power cartridge make it easy to control and it is surprisingly accurate.

Vz. 61 "Škorpion"

Rank: Rookie

Caliber: .380 ACP

Accuracy: +0

Control: +2

Aim/Burst: 1/5

Reload: Moderate

Modifiers: Folding stock (+1 Control, +1 Size when deployed)

Size: 2

Czechoslovak machine pistol from the 50s.

Nagant Revolver

Rank: Rookie

Caliber: 7.62x38mmR

Accuracy: 0

Control: 0

Aim/Burst: 1/2

Reload: Moderate/Long (One round/ All)

Modifiers: 7 round revolver magazine

Size: 2

Russian revolver from 1895 that served as the standard sidearm for a while. It's design was outdated even at the time but it's unique rounds make it one of the few revolvers capable of being suppressed.

P38

Rank: Cleaner

Caliber: 9x19mm Luger

Accuracy: +1

Control: +1

Aim/Burst: 1/3

Reload: Short

Modifiers: None

Size: 2

Leftovers from WW2 and active service weapon for the West-German Bundeswehr

APB "Stechkin"

Rank: Cleaner

Caliber: 9x18mm

Accuracy: +0

Control: +1

Aim/Burst: 1/8

Reload: Short

Modifiers: None

Size: 2

Special machine pistol favored by special forces as a sidearm. Despite it's small size it is very controllable.

S4MI

Rank: Liquidator

Caliber: 7.62x39mm

Accuracy: -3

Control: -1

Aim/Burst: 1/2

Reload: Moderate

Modifiers: 2 round magazine. 15m Range; Does not accept pistol stock or muzzle devices.

Size: 1

Special 2 barreled emergency pistol. Fires the same rounds as the AKM and packs quite a punch.

PM-63

Rank: Liquidator

Caliber: 9x18mm

Accuracy: +0

Control: +1

Aim/Burst: 1/5

Reload: Short

Modifiers: Foldable front grip (+1 Control), Folding stock (+1 Control, +1 Size when unfolded)

Size: 3

Polish machine pistol that can be used one handed or two handed with a folding front grip.

Special weapons

Special purpose weapons that are often very destructive but not intended for normal combat.

IS Ampulomet

Rank: Rookie

Caliber: 50mm Ampules

Accuracy: -2

Control: -2

Aim/Burst: 1/1

Reload: Very long

Modifiers: Can't be fired on the move. Disadvantage when shot while not deployed. 100M Range.

Size: 10

Heavy

Based on an earlier WW2 artillery piece this mortar like weapon fires spherical, glass ampules filled with various agents. Unlike rocket launchers it is relatively quiet and the rounds don't explode and leave behind glass.

IS Dart gun

Rank: Rookie

Caliber: 4.5mm Syrettes

Accuracy: 0

Control: 0

Aim/Burst: 1/1

Reload: Moderate

Modifiers: 15m effective range; Works under water

Size: 2

A dart gun developed by the Institute based on the SPP-1 under water gun. It can shoot syrette ammunition capable of administering a variety of drugs to a target.

Air Gun

Rank: Rookie

Caliber: 6mm BB

Accuracy: +0

Control: +5

Aim/Burst: 1/5

Reload: Medium

Modifiers: 50m effective range; Can not kill targets even on **weak spot** hit unless target is very small and fragile.

Size: 8

This is a toy.

IS Harpoon gun

Rank: Rookie

Caliber: 64mm Harpoons

Accuracy: -1

Control: -1

Aim/Burst: 1/1

Reload: Long

Modifiers: 50m effective range

Size: 10

Harpoon gun derived from a 32 gauge shotgun. Can fire a variety of specialized harpoons.

IS Net launcher

Rank: Rookie

Caliber: 40mm Net rounds

Accuracy: 0

Control: 0

Aim/Burst: 1/1

Reload: Long

Modifiers: 20m effective range

Size: 8

Net gun made from a modified Dyakonov grenade launcher and a cut down Mosin Nagant.

AKS-74U "Byurokrat"

Rank: Cleaner

Caliber: 5.45x39mm

Accuracy: -1

Control: +1

Aim/Burst: 1/4

Reload: Moderate

Modifiers: Folding stock (-2 Size, -1 Control when folded)

Size: 8,

Special KGB conversion for the AKS-74U that hides it in a break-away suit case. Pressing the button on the handle will drop the suitcase and give you access to the loaded gun, albeit with folded stock. The attached grip makes aiming awkward, the gun lacks the muzzle device and only 30 round or smaller magazines fit in the case. For when you need to carry a loaded AK in public, without everybody knowing.

PBS-41 Kurz

Rank: Cleaner

Caliber: 14.5x114mm

Accuracy: -2

Control: -2

Aim/Burst: 1/2

Reload: Medium

Modifiers: 5 round internal magazing; Stripper clip reload

Size: 8

Heavily modified version of the Simonov anti tank rifle from WW2. The barrel has been cut down to just infront of the magazine and a rubber but plate has been installed. For when you get ambushed by a tank at close range. Uses 14.5mm stripper clips.

IS Coil Gun Prototype

Rank: Liquidator

RP: Weaponized Fields

Caliber: 6mm BB

Accuracy: +5

Control: +1

Aim/Burst: 1/1

Reload: Medium

Modifiers: +3 DMG +3 AP, Integrated scope

Size: 8

Heavy

Prototype coil gun on the basis of a Mosin Nagant rifle.

LPO-50

Rank: Liquidator

Caliber: Fuel DMG 10 AP 0

Accuracy: 0

Control: 0

Aim/Burst: 0/10

Reload: Impossible

Modifiers: Backpack Fuel Tank with 30 Fuel charges, Bipod (+2 Control when deployed)

Size: 20

Heavy

Cleansed in fire. Soviet flamethrower from the 50s. Comes with a backpack carrying 3 smaller tanks each producing a continuous fire blast for up to 4 seconds. Everything hit will be covered in a burning, sticky liquid that will continuously damage targets caught within and set flammable surfaces on fire.

IS AK Coil Conversion

Rank: Handler

RP: Weaponized Fields, Miniaturization Efforts

Caliber: 5mm Coil Round

Accuracy: +5

Control: +5

Aim/Burst: 1/3

Reload: Medium

Modifiers: Integrated scope

Size: 12

Heavy

Coil gun conversion of a MPi-KM

Kulakov Grenade launcher

Rank: Senior

Caliber: 44mm Grenades

Accuracy: -2

Control: -1

Aim/Burst: 1/1

Reload: Very long

Modifiers: 5 round internal magazine, Bipod (+1 Control when deployed)

Size: 10

Prototype WW2 grenade launcher readapted by the Institute. Essentially a cut down Mosin Nagant with a large revolving drum at the front.

Melee

Melee weapons that can often be used as general tools or last ditch weapons

AK Bayonet

Damage: 5 AP 1

Modifiers: Serrated edge, fits most AK patterns, gets advantage for **Get Stuck In** when attached to one

Size: 1

Ol' reliable.

Entrenching tool

Damage: 4

Modifiers: Can be worn like a tool

Size: 3

Field shovel with sharpened edge, a soldier's best friend.

Heavy duty flashlight

Damage: 2

Modifiers: Can be worn like a tool

Size: 3

Stainless steel flashlight using AA batteries, popular with taxi drivers.

Crowbar

Damage: 3

Modifiers: Can be worn and used like a tool

Size: 4

Yes, it's red, why?

Survival Knife

Rank: 1

Damage: 5

Modifiers: Serrated edge, assortment of other tool options including a ruler, can even be used as a trowel in a pinch

Size: 1

Spetsnaz survival knife, some people would kill to have one

Firefighting Ax

Damage: 8 AP 1

Modifiers: Can be worn and used like a tool; Two handed.

Size: 8

Firefighting ax with pry bar on the back.

Attachments

Dovetail mid range optic

+1 Size; + 1 Accuracy

Dovetail long range optic

+2 Size; + 2 Accuracy; -1 Control

Dovetail night sight

+2 Size; + 1 Accuracy; Not usable in bright environments or those without any light.

Front grip

+1 Size; + 1 Control; Custom, wooden front grip for rifles.

Detachable Pistol Stock

+1 Size; +1 Control; Custom wire stock that fits most handguns without one.

Suppressor

+1 size, suppresses the gun but not the super sonic crack of the round. Can generally not be put on special weapons.

Flashlight

+1 Size. Thanks to duct tape there is almost always a way to mount one on a gun (within reason). Takes time to toggle on or off. Can not be detached in the field without breaking the mount.

Rifled choke

+1 Accuracy for Slug ammunition. Only works on shotguns, limits the use of special ammo like Bag or Chaff. Can't be taken off in the field.

Full choke

Extends range for advantage damage rolls to 20m. Only works on shotguns. Can only fire shot shells, no special ammo or slugs. Can't be taken off in the field.

12	Slug	5AP1			-1 Acc	Rookie	Slug for hunting

Special Ammo

Kinetic

Name	Damage	Mod.	Req.	Description
6mm BB	<1AP0		Rookie	6mm steel bearing ball for the air and coil gun prototype
5mm Coil Round	3AP5		Handler	5mm coil gun round
Harpoon Standard	5AP1	40m steel wire and spool	Rookie	Metal harpoon with hooks for use against anomalous creatures
Harpoon Explosives	3AP0	Deals 20AP2 damage in a 5m radius and 5AP1 damage in a 10m radius 5s fuse	Cleaner	Hope it doesn't run towards you
Harpoon Reality Anchor	2AP0	Disrupts some anomalous effects in targets like teleporting for 5 min	Cleaner Weaponized Fields	Make sure to retrieve harpoon after use

Explosive

Name	Mod.	Req.	Description
40mm Pallad Standard	Deals 10AP2 damage in a 5m radius and 4AP1 in a 30m radius	Senior	6mm steel bearing ball for the air and coil gun prototype

Name	Mod.	Req.	Description
40mm Pallad Smoke	Deploys smoke for up to 1 minute Does not obscure infrared	Handler	Avoid long term exposure, comes in white, black and red
44mm Kulakov Standard	Deals 10AP2 damage in a 5m radius and 4AP1 in a 30m radius	Senior	For the Kulakov launcher
44mm Kulakov Shrapnel	Deals 8AP2 damage in a 10m radius and 3AP1 in a 60m radius	Senior	Kulakov grenade for defensive situations, large radius requires extra care
44mm Kulakov White Phosphor	Deploys white phosphorous smoke for 1 minute Will apply burning status flammable material and creatures caught within Blocks infrared	Senior	Do NOT use against non anomalous humans or in urban areas

Other

Name	Mod.	Req.	Description
4.5mm Syrette Sedative	Strong immobilizing poison capable of incapacitating an elephant within a minute	Rookie	Strong dose of an etrophine derived sedative. Use on humans may cause long term health effects
4.5mm Syrette Anti-Memetic	+1 Mind -2 Cognition -1 Charisma Confusion Target will use their short term memory over the next hour	Cleaner Advanced Anti Memetics	Side effects include nausea, vomiting, headaches, confusion and fainting. Long term health effects possible. Only use in emergencies
4.5mm Syrette Poison	Applies Poisoned status to target	Rookie Advanced Poison Research	Administers a poisonous compound derived from the acokanthera plant capable of killing an elephant in minute
Net Standard	Nylon net, may immobilize target	Rookie	If deployed too close (< 5) will fail to open and may injure target
Net Steel	Steel net, may immobilize target -5m effective range	Rookie	If deployed too close (< 5) will fail to open and may injure target
50mm Ampule Smoke	Deploys smoke for up to 1 minute Does not obscure infrared	Rookie	White smoke for the Ampulomet

Name	Mod.	Req.	Description
50mm Ampule Paint	Deploys yellow paint over a 15m radius	Rookie	Useful for revealing invisible objects or creatures
50mm Ampule CS	Deploys "tear gas" in a 15m radius, gas lingers for up to 5 minutes Reagent sticks to surfaces for longer	Rookie	Only against Geneva Convention if used in a war
50mm Ampule WP	Deploys white phosphorous smoke for 1 minute Will apply burning status flammable material and creatures caught within Blocks infrared	Handler	Do NOT use against non anomalous humans or in urban areas
50mm Ampule Anti-Memetic	Deploys anti memetic gas in a 10m radius +1 Mind -4 Cognition -1 Charisma Confusion Targets will use their short term memory over the next hour	Cleaner Weaponized Agents Advanced Anti-Memetics	Side effects include nausea, vomiting, headaches, confusion and feinting. Long term health effects possible. Only use in memetic emergencies
50mm Ampule Defoliant	Deploys a strong herbicide over a 10m radius Toxic to most animals	Cleaner Weaponized Agents	Do NOT use against non anomalous humans

Name	Mod.	Req.	Description
50mm Ampule Lockdown	Deploys an immobilizing contact agent in a 15m radius	Cleaner Weaponized Agents Advanced Poison Research	Capable of sedating a herd of elephants in up to 5 min. Potentially lethal to humans or smaller animals
50mm Ampule Amber	Coats a 10m area with a quickly hardening, amber like substance	Liquidator Weaponized Agents	Useful for killing swarms of smaller creatures or in incapacitating others. Potentially lethal, causes skin burns

Gear

Gear generally is there to carry stuff be that armor or other items. How much space you can see in the inventory attribute. In brackets you can see the biggest size item you can put in it (cause you can't cram large things into small pouches).

Special Clothing

Is worn like normal clothing, does not take up a slot.

IS Hazmat suit

Modifiers: Comes with integrated respirator and protects against many environmental threats but not direct exposure. If the Janitor takes damage, roll a d6, if the player rolls a 1 the suit is compromised and needs to be fixed or changed. Comes in green or blue.

IS Firefighter suit

Modifiers: Gives resistance to fire. Janitors can stay one turn longer in a fire before catching fire (they will still take damage) and suffer -2 hp less damage from fire. Does not protect from smoke inhalation.

IS Adaptive Camo

Rank: Liquidator

Requirements: Advanced Organics Research

Modifiers: Suit made of synthetic squid skin capable of adapting it's pattern based on the environment. A series of small eye cells provides information to the suit. Suit needs to be submerged in nutrient solution during storage.

IS Second Skin

Rank: Liquidator

Requirements: Advanced Organics Research

Modifiers: +1 Armor. Skintight suit worn under other clothes with the look and feel of light leather. The suit covers most of the wearer's body similar to a wetsuit, leaving the feet, hands and head exposed.

Headwear

Name	Armor	Mod	Requirements	Description
M56	1		Rookie	Standard issue steel helmet used by the NVA
Riot Helmet	2	Only protects from melee damage	Rookie	Police riot helmet with a clear acrylic face shield
BESPA Headpiece	2AP-1	Disadvantage to all Motorics and Physique rolls as well as Scout rolls; Heavy	Liquidator	Large metal box with view slit. Since it is secured by the shoulders the wearer needs turn their entire body to look around
PNV-57IS NVG	0	100m low light vision; Very sensitive; 30 min battery	Liquidator	A pair of night vision goggles mounted to a tanker's hat. Originally intended for vehicle crews it has been adopted for Institute use

Name	Armor	Mod	Requirements	Description
PSH-77	2AP-1	Face shield (+1 Armor and disadvantage on scout checks when folded down); Heavy	Senior	Swiss titanium helmet bought by the soviet union for special forces use.
IS Thermal Goggles	0	40m infrared vision; 15 min battery; Heavy	Handler Mini. Efforts	Head mounted thermal camera
IS Motion Goggles	0	20m of Motion-sight; Penetrates light walls; Monocular; 15 min battery; Heavy	Senior Mini. Efforts Advanced Creature Tracking	Head mounted display for motion detection

Armors

Name	Armor	Mod	Requirements	Description
BESPA Vest	2		Rookie	Soft body armor. More for morale
IS Stab Proof	3	Only protects from melee attacks Heavy	Rookie	A modern version of an old classic
IS Low Profile	1		Rookie	Low profile vest to be worn under bulky clothing, made from ballistic fabric. Can be worn with the Undercover Rig
IS Heavy Vest	4 -1AP	Heavy	Cleaner Advanced Ballistic Protection	Bulky, heavy vest using metal inserts

Name	Armor	Mod	Requirements	Description
IS Ceramic Vest	2 -2AP		Cleaner Advanced Ballistic Protection	Usage of ceramic inserts offers better protection against armor piercing rounds but less durability overall
IS Life Vest	4	Regenerates armor during a rest Heavy	Liquidator Regenerating Armor	It bleeds

Rigs

Name	Inv.	Req.	Description
Magazine Pouch	9(2)	Rookie	Like a messenger bag, for the messengers of death
Drum Magazine Pouches	8(4)	Rookie	Two pouches for a single AK drum mag or two MPi-41 drums each
Chest Rig	11(3)	Cleaner	The Chinese were onto something here
SKS Rig	20(1)	Rookie	10 pouch bandolier for clips or small magazines
Undercover rig	4(2)	Rookie	Undercover rig for carrying a pistol and some ammo. Worn under clothes. Can't be worn with normal vests. Only things stored in the inventory of the rig are concealed, this includes guns. Does not withstand a thorough check or hide items from metal detectors

Name	Inv.	Req.	Description
IS Root Rig	14(4)	Liquidator Advanced Organics Research	A full body combat rig supported by a net of small roots that adhere to the skin of the Janitor and distribute the load. Increases heavy load capacity to 6. Painful to remove.

Backpacks

Name	Inv.	Req.	Description
Sturmgepäck	16(12)	Rookie	NVA backpack in Strichtarn camo. Looks a bit like a military school bag
Civilian Messenger Bag	6(6)	Rookie	Canvas bag, commonly worn by college students and those that want to look like them. Can be worn in the tool slot.
Civilian Duffel Bag	14(14)	Rookie	Bag of choice for athletes and bank robbers.
IS Portable Protected Container	18(12)	Rookie	Heavy duty (emphasis on heavy), lead lined, air sealable container for anomalies. The container can be locked with a code and has multiple dials on the side showing internal temperature and pressure.

Consumables

Name	S	C	Mod	Req.	Description
Personal Aid Kit	1	1	+1 First Aid	Rookie	Basic first aid kit for soldiers
AI-2	1	4	Helps with radiation sickness for the duration of the mission	Rookie	Ubiquitous soviet first aid kit, the morphine is always missing

Name	S	C	Mod	Req.	Description
Anti-Memetics	1	4	+1 Mind; -2 Cognition; -1 Charisma; Confusion; Loss of short term memory over the next 1d6 hours	Rookie	Better than the alternative, usually. Highly potent blend of benzodiazepines and other drugs
Antidote kit	1	4	Removes poisoned status (with exceptions); Does not protect from Pathogens	Rookie	Contains a variety of common antidotes, specifically against compounds used by the Institute
Cyanide Pill	0	1	Kills human within 5 minutes	Rookie	.
Ibuprofen 800mg	1	4	Restores 1HP during rest; Only once per Janitor; -1 Mind until next rest; Painkiller	Rookie	Dulls the pain and the mind
Chocolate Ration	1	4	Restores 2 Sanity during rest; Only once per Janitor;	Rookie	Studies show that chocolate has a positive effect on morale
Combat Stim	1	1	-3 Sanity, -1 Mind, +1 Cognition, +1 Physique until next rest; Addictive; Painkiller	Liquidator Advanced Metabolism	Potent combat drug in tablet form. Colloquially called "Traubenzucker" by Janitors. Do not take more than one per day!
Purge Agent	1	1	Removes poison and pathogens in incubation stage; -1 to all stats; -5HP; Vomiting;	Cleaner Advanced Pathogen Protection	Potent cocktail of antidotes, poisons and antibiotics. Must be administered early to combat pathogens.

Name	S	C	Mod	Req.	Description
M-Serum	1	1	HP set to 15; Sanity set to 10; Removes all statuses; +1 Physique; Janitor loses 1HP and 1 Sanity per turn/minute;	Senior Advanced Mutation Research	Emergency use only. Strong mutagenic agent that acts almost instantly. The Janitor will proceed to mutate over the next minutes and become highly anomalous. Serum contains a strong poison to kill them within roughly 15 minutes. Janitor should not be helped and body needs to be destroyed/recovered
Animal Repellent	1	5	Up to 30m range; Stuns and confuses most creatures	Rookie	Heavy duty animal repellent or "bear spray"
Carnivore Bait	2	1		Rookie	Fresh meat
Herbivore Bait	2	1		Rookie	Fresh herbs?
Animal Poison	2	2	Applies the Poisoned status when consumed by creatures	Rookie	Small flask of high strength animal poison
Herbicide	2	2	Applies the Poisoned status when sprayed over plants	Rookie	High strength herbicide and defoliant reverse engineered from Agent Orange. Warning, adverse health effects in humans.
Nitric Acid	2	2	Highly corrosive, eats through metal and organic material.	Rookie	Plastic nitric acid container with build in pipette

Name	S	C	Mod	Req.	Description
Small Fuel Can	2	1	1 Liter of common fuel	Rookie	Fuels most small appliances
Battery Pack	2	0	Single battery pack; Fits standard equipment	Rookie	Rechargeable battery pack for equipment issued by the Institute
Ammo Pack	6	120	During a rest you can fill any mag with the ammo it had at the start of the mission; Heavy	Rookie	If you have this, you are the mule of the group
Thermite	2	1	Melts almost everything; 30 sec fuse	Rookie	Keep clear
TNT Block	3	1	30 DMG in a 10m radius; 30 sec fuse	Cleaner	Useful if you want something gone
Decontaminant	5	1	Clears the air and surface of pathogens in a 30m radius; Poisonous; Lingers for 30 minutes and requires full rebreather.	Liquidator Advanced Pathogen Protection	Large canister that creates a big cloud of decontaminant. Very hazardous to breathe in.
RDG Smoke Grenade	1	1	40m Range; Deploys smoke for up to 1 min; Does not obscure infrared;	Rookie	Handheld smoke grenade, comes in white or black. Avoid long term exposure

Name	S	C	Mod	Req.	Description
Signal Flare	1	1	Fires a flare up to 50m; Can cause fires	Rookie	Handheld pyrotechnic flare, fires a bright, hot flare by pulling the cord on the back. Comes in a variety of colors and shapes
F1 Grenade	1	1	40m Range; Deals 10AP3 damage in a 5m radius and 4AP1 in a 30m radius; 5 second fuse	Rookie	The F is for France
IS Stun Grenade	1	1	Emits a field that knocks out creatures with a Mind value below 3 in a 5m radius for 2d6 minutes	Cleaner Weaponized Fields Mini. Efforts	Institute developed stun grenade based on anomalous research. Make sure to collect the grenade afterwards.

S: Science; C: Charges

Tools

Name	S	Slot	Mod	Req.	Description
Locators	1		Can be thrown to reveal some Phenomenon or Object type anomalies, or as a distraction	Rookie	"They call them locators, but it's just bits of metallic scrap really"
GM Counter	2		Shows radioactive particle counts per minute; Has a speaker that audibly clicks when particle is registered, can be turned off	Rookie	Military Geiger counter, useful for finding radiation sources

Name	S	Slot	Mod	Req.	Description
EMF Scanner	2		Detects electromagnetic fields in a 90 degree arc.	Rookie	Can be used to detect certain anomalous fields or power lines
Motion Sensors	2		Makes loud buzzing noise if it detects motion; 1 min setup; 4hr battery	Rookie	Small radio based motion detector
IS Handheld Field Detector	4	Tool	Detects anomalous fields in a 60 degree arc; 10m range; 60 min battery; Heavy	Cleaner Advanced O/P Detection Mini. Efforts	Handheld version of the Sphere detector
IS Thermal Scanner	4	Tool	Shows temperature information on a small CRT; 45 degree arc; 20m range; 5 temperature ranges; 30min battery life; Heavy	Mini. Efforts	"Why is it colder here?"
IS Motion Scanner	4	Tool	Detects motion in a 90 degree arc; 10m range; Penetrates light walls; Audibly clicks when motion is detected; Dials show intensity and direction; 30min battery life; Heavy	Cleaner Advanced Creature Tracking	"It's in the walls"

Name	S	Slot	Mod	Req.	Description
Handcuffs	1			Rookie	A pair of police handcuffs
Rope	3	Tool	30m length	Rookie	Climbing rope
Steel chain	2	Tool	1m of sturdy, steel chain and padlock	Rookie	Good enough for your bike
IS Anchor	4	Tool	30m metal wire spool with brake and carabiner hook on a sturdy belt	Rookie	Make sure to anchor it to something sturdy
Lockpick Set	1		Adds the ability to pick open locks	Rookie	A set of professional lock picking equipment
Blowtorch	3		Can cut steel; Requires some setup to work	Rookie	Messy and flammable, a great combination!
Bolt Cutter	3	Tool	Bolt cutter	Rookie	Cuts bolts (and other things)
Penlight	1		Flashlight	Rookie	A pen sized flashlight often used by mechanics and industrial inspectors
Short Range Radio	2		Simplex radio; 299 Channels; 6km range; 10hr battery; Not encrypted;	Rookie	Small radio so agents can communicate in the field. This version features the "Memetic Plug"
Medic Bag	6	Tool	Advantage on First Aid rolls	Rookie	Shoulder slung medical bag, can probably be used for other things in a pinch

Name	S	Slot	Mod	Req.	Description
PMG-2 Gasmask	6	Tool	Disadvantage on Scout rolls; Will only remove contaminants, does not supply oxygen	Rookie	Military gas mask with voice membrane for talking. Comes with it's own bag with goodies and one filter
KIP-8	1 2	Back	Rebreather; 45min of air; Heavy	Rookie	Heavy duty breathing apparatus for firefighting, hazmat and low oxygen environments
Assault Shield	8	Tool	Armor: 10; Disadvantage to attack rolls with two-handed weapons; Heavy		Heavy ballistic shield for special forces. Only covers upper body
Chainsaw	1 2	Back	Uses fuel; 15 min use time; Heavy	Rookie	Common gasoline chainsaw for forestry work. Cuts through almost all biological material
IS Object Manipulator	6	Tool	1m length, telescoping; Insulated	Rookie	"We are deep in the shit and they give us a fucking garbage claw"
IS Creature Manipulator	8	Tool	3m length, telescoping	Rookie	Telescoping pole with adjustable steel wire sling at the end to handle wild creatures

Name	S	Slot	Mod	Req.	Description
IS Field Analyzer	6	Tool	After calibration, monitors a 50m radius for anomalous fields, will start beeping if it detects something Multiple readouts show information on the field 4hr battery	Cleaner Advanced O/P Detection	Special anomaly detector to detect anomalous fields often exhibited by phenomenons and objects.
IS Nullsphere Generator	9	Back	Generates a "Nullsphere" in a 10m radius which normalizes anomalous fields Needs to be deployed 30 min battery	Cleaner Advanced O/P Containment	Warning, activating the nullsphere in an active field can have unforeseen consequences and be dangerous to humans caught on the edge of the sphere
IS Gas Analyzer	6	Back	Analyses airborne particles for pathogens and other harmful substances 3hr battery	Cleaner Advanced Pathogen Detection	When turned on the device emits a constant hum and vibrates like a washing machine, some Janitors have described this as pleasant

Research Focuses

Containment

Name	Requirements	Description
Advanced O/P Containment	10 Object RP 5 Phenomenon RP	More advanced containment options than a simple container
Miniaturization Efforts	10 Object RP 10 Phenomenon RP	Through the study of anomalous objects and fields we might be able to reduce the size of equipment
Advanced Creature Containment	8 Creature RP 5 Object RP 5 Phenomenon RP	Research into phenomenon anomalies might help us negate similar behavior in creatures.
Advanced Pathogen Containment	10 Pathogen	Potential pathogen containment or destruction options

Protection

Name	Requirements	Description
Advanced O/P Protection	10 Object RP 10 Phenomenon RP	Study of the destructive effects of object and phenomenon anomalies may help us create new protective equipment.
Advanced Ballistic Protection	Miniaturization Efforts 15 Object RP	Creation of new armor
Advanced Memetic Protection	15 Memetic RP	Research into memetic anomalies might lead to breakthroughs in personal protective equipment
Advanced Pathogen Protection	10 Pathogen RP	Advanced filter systems and potential vaccines
Regenerating Armor	Plant/Creature Hybrids 4 Plant RP 4 Creature RP 2 Object RP	Study of the regenerative capabilities of plant anomalies could lead to breakthroughs in regenerating armor technology

Detection

Name	Requirements	Description
Advanced O/P Detection	10 Object RP 10 Phenomenon RP	Study of the anomalous fields inherent in object/phenomenon type anomalies would help us make tools to detect them
Advanced Pathogen Detection	10 Pathogen RP	Better early detection of pathogens
Advanced Creature Tracking	10 Creature RP 5 Phenomenon RP	Using insights into anomalous fields we could utilize them to track creatures even through objects.

Medical

Name	Requirements	Description
Advanced Mutation Research	10 Creature RP 5 Mutated Janitors	Study of the effects of mutation on Janitors and creatures might reveal new insight into the process.
Advanced Organics Research	10 Creature RP 10 Plant RP	Further studies on anomalous properties of organic material
Advanced Metabolism	10 Creature RP 8 Plant RP	Enhancing stimulants based on creature and plant research
Advanced Anti-Memetics	10 Memetic RP 5 Pathogen RP 2 Creature RP 2 Plant RP	Advanced anti memetic compounds

Weapons

Name	Requirements	Description
Weaponized Agents	Miniaturization Efforts 8 Pathogen RP 2 Plant RP 3 Creature RP	Further research into chemical agents could help us develop them into ammunition for ranged deployment
Advanced Poison Research	4 Creature RP 4 Pathogen RP 6 Plant RP	Study of quick acting poisons and corrosive agents

Name	Requirements	Description
Weaponized Fields	2 Object 4 Phenomenon 4 Memetic	Usage of anomalous fields in weaponry
